Mobile Solution Module .....	4
General Module .....	4

## Introduction

The purpose of this document is to describe in detail the technical and functional updates of a minor version change to Protean Software.

The updates listed in this document detail the differences between version Maintenance Release 6 and version **7.3.4492** (Maintenance Release 7).

With regards to the installation of this build, if you are currently using a version prior to 7.3.4378, you will need to uninstall the Protean client from the PC before you can install the new client.

## Issues Resolved

### Mobile Solution Module

#### **ID 5946**

PDA Engineer – Occasionally, when the Mobile device auto-refreshed, the meter readings entered against an equipment record would remove

#### **ID 5996**

PDA Engineer – When creating a new job on the Mobile device, the history of the equipment record on the job was not pulling through

#### **ID 6020**

PDA Engineer – If a new Location was added against an equipment record on the Mobile device, this was not selectable within the Location filter

#### **ID 5993**

PDA Engineer – Stock Sync doesn't update when run manually

#### **ID 5987**

PDA Engineer – Internal Messages from the engineer were being sent back as drafts

### General Module

#### **ID 6014**

General – On rare occasions, when Protean is installed, users would receive error 459 when trying to view certain screens

#### **ID 6027**

General – Compatibility Issue with machines running Office 365. Global Enquiry and filter refresh issue

#### **ID 5942**

Batch Update – Miscellaneous Postings not recording cost centre codes for Recharge jobs
